

HOD's Message

It is an honour and a source of tremendous pride for me to serve as the head of the Electrical Engineering Department at this venerable and famous academic institution. Electrical engineering (EE) is currently in first place as a result of its recent acceptance and adoption by all industries and academic institutions. As a result, our students have gained the self-confidence necessary to successfully compete with students majoring in other competitive fields. Education of the highest calibre is provided in a wide variety of fields, including power system engineering, instrumentation & control engineering, biomedical engineering, electric vehicles, AI & ML and Industrial automation amongst others. When it comes to accomplishing the department's aims and objectives, the inborn talents of our students are receiving excellent care from highly qualified teachers and staff members who put in a lot of effort to build up their career building of the students. Our department is comprised of a variety of laboratories, each of which is outfitted with the most recent technological setups. These laboratories provide the opportunity for each student/research scholar to gain personal, hands-on experience, which in turn will boost their self-assurance and prepare them to tackle the real-world challenges that arise in the field of electrical engineering.

In addition to the standard course load, the faculty of this division works hard to mould students into intellectual wunderkinds. Workshops, technical training, project-exhibition, guest lectures, and seminars by experts from industry and academic backgrounds are just some of the programmes that are run by the department under the auspices of the departmental association in order to provide staff and students with ongoing opportunities to expand their knowledge base. Learning about the most recent advancements in the field of electrical engineering can be facilitated by participating in this activity. Students are taken on frequent field trips to local industries in order to improve their practical skills and develop meaningful connections with others who work in their respective fields. We are proud to say that the students of the department have been placed in reputed companies and the government sector.

We continue to play a leadership position in our field, which propels us toward the creation of an innovative and successful professional graduate community that would be vibrant and provide ongoing education. I would want to send my best wishes to everyone currently studying in the department of electrical engineering, at Gautam Buddha University.

-Dr. M. A. Ansari

Head, Electrical Engineering Department
